Preface

vii

1. Introduction

1

- 1.1 Introduction 1
- 1.2 Historical Development 2
- 1.3 Definitions 3
- 1.4 Types of Water Supply Systems 5
 - 1.4.1 Surface Water Supply Systems 5
 - 1.4.2 Groundwater Supply Systems 6
 - 1.4.3 Regional Rural Water Supply Systems 6
 - 1.4.4 Purchased Water Supply Systems 6
- 1.5 Types of Piping Systems 6
 - 1.5.1 Transmission Lines 6
 - 1.5.2 In-Plant Piping Systems 7
 - 1.5.3 Distribution Mains 7
 - 1.5.4 Service Lines 7
- 1.6 Types of Water Distribution Networks 7
 - 1.6.1 Serial Networks 7
 - 1.6.2 Branched Networks 8
 - 1.6.3 Looped Networks 8
- 1.7 Labelling Network Elements 8
 - 1.7.1 Branched Networks 9
 - 1.7.2 Looped Networks 9
- 1.8 Network Components 9
- 1.9 Network Model 10
- 1.10 Some Basic Hydraulic Principles 10
 - 1.10.1 Continuity Principle 10
 - 1.10.2 Energy Principle 14

2. Frictional Head Loss in Pipes

19

- 2.1 Introduction 19
- 2.2 Darcy-Weisbach Formula 19

2.3	Nikuradse's Experiments on Artificially Roughened Pipes	27
2.4	Moody Diagram	22
2.5	Friction Coefficient Relationships	24
2.5.1	Laminar Flow	24
2.5.2	Transitional Flow	24
2.5.3	Smooth Turbulent Flow	24
2.5.4	Transitional Turbulent Flow	25
2.5.5	Rough Turbulent Flow	25
2.6	Explicit Relationships for Friction Coefficient	25
2.6.1	Smooth Turbulent Flow	26
2.6.2	Transitional Turbulent Flow	26
2.6.3	All Flow Regimes	28
2.7	Empirical Formulae	30
2.7.1	Hazen-Williams Formula	30
2.7.2	Modified Hazen-Williams Formula	33
2.7.3	Manning Formula	34
2.8	Comparison of Head Loss Formulae	35
2.9	General Head Loss Formula	35
2.10	Simple Pipe Flow Problems	36
2.10.1	Determination of Head Loss	36
2.10.2	Determination of Discharge	39
2.10.3	Determination of Diameter	39
2.11	Reduction of Carrying Capacity with Age	41
2.12	Problems	44

3. Minor Head Loss in Pipes

45

3.1	Introduction	45
3.2	Sudden Enlargement	45
3.3	Gradual Enlargement	46
3.4	Exit	46
3.5	Sudden Contraction	50
3.6	Gradual Contraction	51
3.7	Entrance	51
3.8	Bends and Elbows	51
3.9	Tees	52
3.10	Obstructions	52
3.11	Flow Meters	53
3.12	Valves	53

4. Equivalent Pipes

54

4.1	Introduction	54
4.2	Pipes in Series	54
4.2.1	Discharge Known	55
4.2.2	Total Head Loss Known	57

4.3	Pipes in Parallel	58	
4.3.1	Head Loss Known	59	
4.3.2	Total Discharge Known	60	
4.4	Pipes in Series-Parallel	61	
4.5	Minor Loss Elements	62	
4.5.1	Darcy-Weisbach Formula	62	
4.5.2	Hazen-Williams Formula	63	
4.5.3	Manning Formula	63	
4.5.4	Equivalent Pipe Lengths	63	
4.6	Problems	65	
5.	Reservoirs, Pumps and Valves		67
5.1	Reservoirs	67	
5.1.1	Impounding Reservoirs	67	
5.1.2	Service and Balancing Reservoirs	67	
5.1.3	Three-Reservoirs System	70	
5.1.4	Multiple-Reservoir System	72	
5.2	Pumps	74	
5.2.1	Introduction	74	
5.2.2	System Head-Discharge Curve	75	
5.2.3	Pump Head-Discharge Curve	75	
5.2.4	Head-Discharge Relationships	76	
5.2.5	Characteristic Curves	78	
5.2.6	Pump Combinations	79	
5.3	Valves	85	
5.3.1	Check Valves	85	
5.3.2	Flow-Control Valves	86	
5.3.3	Pressure Reducing Valves	88	
5.3.4	Both Flow-Control and Pressure Reducing Valves	92	
5.4	Problems	95	
6.	Network Parameters and Types of Analysis		98
6.1	Network Parameters	98	
6.1.1	Configuration	98	
6.1.2	Pipe Lengths	98	
6.1.3	Pipe Diameters	98	
6.1.4	Pipe Roughness Coefficients	98	
6.1.5	Minor Appurtenances	99	
6.1.6	Demand Pattern	99	
6.1.7	Source Supply Pattern	99	
6.1.8	Hydraulic Gradient Levels at Demand Nodes	99	
6.1.9	Hydraulic Gradient Levels at Source Nodes	99	
6.2	Parameter Interrelationships	99	
6.2.1	Pipe Head Loss Relationship	100	
6.2.2	Node Flow Continuity Relationship	101	

6.2.3	Path Head Loss and Loop Head Loss Relationships	102	
6.2.4	Additional Relationships	103	
6.3	Necessity of Analysis	104	
6.3.1	Design of Networks	104	
6.3.2	Operation of Networks	104	
6.3.3	Calibration of Networks	104	
6.4	Common Assumptions	105	
6.5	Types of Analysis	105	
6.5.1	Flow-Dependent Analysis or Node Head Analysis	106	
6.5.2	Dynamic Analysis	106	
6.5.3	Head-Dependent Analysis or Head-driven Analysis	106	
6.5.4	Node Flow Analysis	107	
6.5.5	Fuzzy-Value Analysis	107	
6.6	Rules for Solvability of Pipe Networks	107	
6.6.1	Rules Proposed by Shamir and Howard	107	
6.6.2	Rules Proposed by Gofman and Rodeh	108	
6.6.3	Rules Proposed by Bhawe	108	
6.6.4	Comparison of Rules	110	
6.7	Problems	113	
7.	Formulation of Equations		115
7.1	Introduction	115	
7.2	States of Parameters	116	
7.3	Basic Unknown Parameters	117	
7.4	Single-Source Networks with Known Pipe Resistances	117	
7.4.1	Branched Networks	117	
7.4.2	Looped Networks	118	
7.5	Multisource Networks with Known Pipe Resistances	123	
7.5.1	Branched Networks	123	
7.5.2	Looped Networks	124	
7.6	Networks with Unknown Pipe Resistances	130	
7.6.1	Branched Networks	130	
7.6.2	Looped Networks	130	
7.7	Inclusion of Pumps	140	
7.7.1	Supply Pumps	140	
7.7.2	Booster Pumps	143	
7.8	Inclusion of Check Valves	143	
7.8.1	Check Valve in an External Pipe	143	
7.8.2	Check Valve in an Internal Pipe	144	
7.8.3	Check Valves in Several Pipes	145	
7.9	Inclusion of Flow Control Valves	145	
7.10	Inclusion of Pressure Reducing Valves	146	
7.10.1	PRV in an External Pipe	146	
7.10.2	PRV in an Internal Pipe	149	
7.10.3	PRVs in Several Pipes	150	

7.11	Inclusion of Different Types of Valves in Same Pipe	151	
7.12	Graph-Theoretic Formulation of Equations	151	
7.13	Problems	152	
8.	Hardy Cross Method		154
8.1	Introduction	154	
8.2	Method of Balancing Heads (Loop Method)	154	
8.2.1	Basic Concept	154	
8.2.2	Single-Source Networks with Known Pipe Resistances	157	
8.2.3	Multisource Networks with Known Pipe Resistances	160	
8.2.4	Networks with Unknown Pipe Resistances	162	
8.2.5	Networks with Pumps	169	
8.2.6	Networks with Valves	171	
8.3	Method of Balancing Flows (Node Method)	174	
8.3.1	Basic Concept	174	
8.3.2	Networks with Known Pipe Resistances	175	
8.3.3	Networks with Unknown Pipe Resistances	176	
8.3.4	Networks with Pumps	178	
8.3.5	Networks with Valves	181	
8.4	Modified Hardy Cross Method	183	
8.4.1	Method of Balancing Heads	183	
8.4.2	Method of Balancing Flows	184	
8.5	Selection of Initial Values	186	
8.5.1	Selection of Pipe Flows	186	
8.5.2	Selection of Nodal Heads	188	
8.5.3	Selection of Unknown Resistances	188	
8.6	Convergence Problem	188	
8.7	Problems	190	
9.	Newton-Raphson Method		191
9.1	Introduction	191	
9.2	Basic Concept	191	
9.2.1	Single-Variable Function	192	
9.2.2	Multiple-Variable Function	193	
9.3	Head Equations	194	
9.3.1	Networks with Known Pipe Resistances	194	
9.3.2	Networks with Unknown Pipe Resistances	197	
9.3.3	Networks with Pumps	200	
9.3.4	Networks with Valves	201	
9.4	Loop equations	203	
9.4.1	Networks with Known Pipe Resistances	203	
9.4.2	Networks with Unknown Pipe Resistances	205	
9.4.3	Networks with Pumps	207	
9.4.4	Networks with Valves	208	

9.5	Labelling Network Elements	209	
9.5.1	Algorithm of Epp and Fowler	210	
9.5.2	Algorithm of Jeppson and Davis	211	
9.6	Modifications to Newton-Raphson Method	214	
9.7	Problems	214	
10.	Linear Theory Method		215
10.1	Introduction	215	
10.2	Pipe-Discharge Equations	215	
10.2.1	Networks with Known Pipe Resistances	216	
10.2.2	Networks with Unknown Pipe Resistances	218	
10.2.3	Networks with Pumps	222	
10.2.4	Networks with Valves	226	
10.3	Nodal Head Equations	227	
10.3.1	Networks with Known Pipe Resistances	227	
10.3.2	Networks with Unknown Pipe Resistances	233	
10.3.3	Networks with Pumps	235	
10.3.4	Networks with Valves	239	
10.4	Relationship between Newton-Raphson and Linear Theory Methods	241	
10.4.1	Pipe-Discharge Equations	241	
10.4.2	Nodal Head Equations	242	
10.5	Problems	245	
11.	Gradient Method		246
11.1	Introduction	246	
11.2	Theory	246	
11.2.1	Networks with Known Pipe Resistances	247	
11.2.2	Networks with Unknown Pipe Resistances	249	
11.2.3	Networks with Pumps	251	
11.2.4	Networks with Valves	254	
11.3	Gradient Method in Matrix Form	256	
11.4	Relationship between Gradient Method, Newton-Raphson Method and Linear Theory Method	265	
11.5	Problems	270	
12.	Other Analysis Methods		271
12.1	Introduction	271	
12.2	Analysis using Electrical Analysers	271	
12.2.1	Hydraulic and Electrical Analogies	271	
12.2.2	Electrical Analysers with Linear Resistors	273	
12.2.3	Electrical Analysers with Nonlinear Resistors	273	
12.3	Analysis through Unsteady Behaviour During Start-Up	275	
12.3.1	Basic Principles	275	
12.3.2	General Discussion	278	
12.4	Analysis through Optimization	278	
12.4.1	Introduction	278	
12.4.2	System Energy Approach	278
